Contents

Motivation 3

Concept 4

Implementation 6

Practice 8

Concept

Build the mental model before showing the code.

A Clear Teaching Slide

Core idea

- Keep each slide focused.
- Use examples students can trace.
- Highlight one conclusion.

Remember

A good diagram or tiny code sample should remove one specific source of confusion.

Implementation

```
#include <vector>

int sum(const std::vector<int>& values) {
    int result = 0;
    for (int value : values) result += value;
    return result;
}
```

Common mistake

State the failure mode directly, then show the corrected line.

Question 1

Answer: A

Which statement best matches the lesson?

A. A focused example is easier to debug.

B. Every slide needs five examples.

C. Long code is always more realistic.

D. Terminology should come before motivation.
